

AMENDMENTS TO THE SPECIFICATION

Please amend the title of the invention on page 1 and page 38 as follows:

"System and Method for Performing Just-In-Time Compilations Using Special Filesystem ~~Embedded Java-Memory-Footprint Performance Improvement~~"

Please amend the paragraph starting on page 29, line 1, as follows:

One of the preferred implementations of the invention is an application, namely, a set of instructions (program code) in a code module which may, for example, be resident in the random access memory of the computer. Until required by the computer, the set of instructions may be stored in another computer memory, for example, on a hard disk drive, or in removable storage such as an optical disk (for eventual use in a CD ROM) or floppy disk (for eventual use in a floppy disk drive), ~~or downloaded via the Internet or other computer network~~. Thus, the present invention may be implemented as a computer program product for use in a computer. In addition, although the various methods described are conveniently implemented in a general purpose computer selectively activated or reconfigured by software, one of ordinary skill in the art would also recognize that such methods may be carried out in hardware, in firmware, or in more specialized apparatus constructed to perform the required method steps.
